📅 Oct 1, 2026

Location-Based Marketing

Location-based marketing uses geographical information to make advertising more relevant to users

Advertisers can target audiences based on countries, regions, cities, or specific areas

Google's advertising ecosystem supports location-based advertising through tools such as Google Ads and AdSense

It is especially useful for businesses that serve customers in particular locations

Google AdSense

Google AdSense is a program that allows website owners to earn money by displaying Google-served advertisements

Publishers place ads on their websites alongside their content

Advertisers purchase advertising through Google Ads and select the locations or audiences they want to reach

AdSense is mainly the publisher-side platform; location targeting is primarily controlled by advertisers through Google Ads

How Location-Based Advertising Works

1

Advertiser selects locations

Countries, regions, cities, or areas can be targeted through Google Ads

2

User visits a website

Google estimates relevant location signals for the visitor

3

Eligible advert is selected

Location and page context can influence the available ads

4

Ad appears through AdSense

The publisher displays the advertisement and may earn revenue from eligible views or clicks

Location Signals

User Consent

Personalized advertising may require consent in certain regions, such as the EEA and UK

Reader Location

The visitor's apparent geographical location

Page Context

Local content can attract advertisers interested in that location

Advertiser Targeting

Businesses can target people within a particular geographic area

A background image of a map with a large red location pin. The map shows various colored regions and yellow lines representing roads or borders.

**Determines
relevant
geographic
area for
delivering
appropriate
advertise-
ments**

Example of Local Advertising

A restaurant in Kathmandu wants to reach potential customers nearby

The advertiser can use Google Ads to target the desired geographic area

Relevant advertisements may appear to users visiting websites with AdSense

This allows the restaurant to focus its advertising on a particular market rather than a worldwide audience

Who Can Use AdSense?

**To
participate
in AdSense,
publishers
generally
need:**

To meet Google's age requirements

Their own original content that follows AdSense policies

Access to the HTML source code of the website

A website that complies with Google's program requirements

How Publishers Earn Money

Publishers earn a share of advertising revenue generated through their websites

The amount earned can depend on factors such as ad demand, location, content, and user interaction

Publishers keep approximately 68% of relevant AdSense advertising revenue, with Google receiving the remainder

Actual earnings can vary and Google's rates and policies may change

When do Publishers Get Paid?

AdSense follows a monthly payment cycle

Earnings are finalized early in the following month

Payments are generally issued during the applicable payment window when the required threshold has been reached and there are no payment holds

If the payment threshold is not reached, the balance carries forward to the next month

Steps to Receive the First Payment

1

**Reach the
required
earnings
threshold**

2

**Complete
identity
verification**

3

**Provide
bank or
other
required
payment
information**

4

**Reach the
payment
threshold**

5

**Receive the
payment
through the
selected
payment
method**

What Can a Publisher Control?

**Publishers
can
influence
their
website's
advertising
environment
through:**

Local Content

Creating content relevant to particular locations

Country Reports

Examining earnings and performance by country

Category Blocking

Restricting certain types of advertisements

Ad Placement

Choosing suitable locations for advertisements on their website

Difference: Google Ad vs AdSense

- Mainly used by advertisers
- Businesses create advertising campaigns
- Advertisers can select geographic areas and target audiences

- Mainly used by publishers.
- Website owners display advertisements
- Publishers earn revenue from eligible advertising activity

Making Location-Based Marketing Work

Follow Google's advertising and AdSense policies

Use appropriate ad placements on the website

Respect user consent and applicable privacy requirements

Create content focused on specific cities, regions, or local interests

Use relevant local topics to attract an appropriate audience

Monitor advertising performance and earnings by country

Benefits & Challenges

Benefits

- Better targeting for local businesses
- Useful for businesses serving specific geographic markets
- Opportunities for publishers to earn revenue
- More relevant advertising

Challenges

- Location estimates may not always be perfectly accurate
- Users may travel or use technologies that affect location detection
- Privacy and consent requirements must be considered
- Advertising revenue can vary significantly

Conclusion

Location is an important factor in modern digital advertising.

Google Ads allows advertisers to target specific geographic markets.

Google AdSense allows publishers to display advertisements and earn revenue.

For advertisers: Google Ads provides local reach. For publishers: AdSense provides advertising income.

Publishers cannot directly use AdSense to target a particular city; precise geographic campaigns belong to Google Ads.

Thank You!
